Cases, Deaths, and Testing in All 50 States

hopkins

U.S.: ARE WE TESTING ENOUGH?

This graph shows the total number of cases, deaths, and tests performed in each state per 100,000 people. By comparing the rate of cases and deaths, we can get a sense of how COVID-19 has affected each state. Since confirmed case numbers may be dependent on how much testing a state is doing, it is also important to see how many tests have occurred in each state. If people who are infected cannot get tested, they will not be counted as a confirmed case in the state's data.
